*The End of Sex and the Future of Human Reproduction* Henry T. Greely, 2018-04-09 “Will the future confront us with human GMOs? Greely provocatively declares yes, and, while clearly explaining the science, spells out the ethical, political, and practical ramifications.”—Paul Berg, Nobel Laureate and recipient of the National Medal of Science Within twenty, maybe forty, years most people in developed countries will stop having sex for the purpose of reproduction. Instead, prospective parents will be told as much as they wish to know about the genetic makeup of dozens of embryos, and they will pick one or two for implantation, gestation, and birth. And it will be safe, lawful, and free. In this work of prophetic scholarship, Henry T. Greely explains the revolutionary biological technologies that make this future a seeming inevitability and sets out the deep ethical and legal challenges humanity faces as a result. “Readers looking for a more in-depth analysis

of human genome modifications and reproductive technologies and their legal and ethical implications should strongly consider picking up Greely's *The End of Sex and the Future of Human Reproduction*... [It has] the potential to empower readers to make informed decisions about the implementation of advancements in genetics technologies." —Dov Greenbaum, *Science* "[Greely] provides an extraordinarily sophisticated analysis of the practical, political, legal, and ethical implications of the new world of human reproduction. His book is a model of highly informed, rigorous, thought-provoking speculation about an immensely important topic." —Glenn C. Altschuler, *Psychology Today*

**Situating Fertility** Susan Greenhalgh,1995-07-13 This collection addresses the world-wide pattern of falling birth rates. Fertility has commonly been treated from a specialized demographic perspective, but there is today widespread dissatisfaction with conventional demographic approaches, which are criticized for neglecting the cultural, social, and political forces that affect reproductive behavior. For their part, anthropologists have only recently begun to apply their characteristic approaches to the study of reproduction. Drawing on new ethnographic and historical research and on a variety of theoretical approaches, the contributors to this book indicate some of the ways in which demography might take into account historical processes, political forces, and cultural conceptions.

**Outside the Womb** Scott Rae, Joy Riley, 2011-01-01 The use of assisted reproductive technology (ART) is on the rise in our culture as an alternative for couples facing infertility issues and single women desiring to have children. Is it right - morally, ethically, biblically - to engage this new technology? Are there some aspects of ART that are more acceptable than others? *Outside the Womb: The Ethics of Reproductive Technologies* addresses the whole issue of "making life", providing valuable information, both theologically and scientifically, for Christian couples to reflect upon as they consider the various fertility treatments.

**Sika Deer** Dale R. McCullough, Seiki Takatsuki, Koichi Kaji, 2008-12-05 Sika deer, the graceful spotted deer of Japanese and Chinese art, originally were native to Asia from far-east Russia to Vietnam to the islands of Japan and Taiwan. They are widely raised in captivity to supply velvet antler for traditional medicine. They also were introduced to Europe, North America, and New Zealand, where they compete or interbreed with native deer. Sika deer typically occupy lowland hardwood forests with low winter snow depths, where they thrive in sites disturbed by fire, storm, or logging. In high numbers they can severely impact vegetation through overgrazing, stripping bark from trees and damaging crop fields and forest plantations. Their numbers are high in many parts of Japan, moderate in Russia, and reduced or extinct in the wild in China, Korea, Vietnam, and Taiwan. This book explores their basic biology, behavior, and ecology, including management for sport hunting, conservation or recovery of threatened populations, and resolution of conflict with humans in native and introduced lands.
