**Citizenship** Ruth Lister,1998 To pinpoint the important theoretical issues that they raise, Lister recasts traditional thinking about the concept of citizenship, exploring its political and policy implications for women in all their diversity. Themes of inclusion and exclusion (at the national and international level), rights and participation, inequality and difference are thus brought to the fore in the development of a woman-friendly theory and praxis of citizenship.

*Air Pollution* Anca Moldoveanu,2011-09-06 Today, an important issue is environmental pollution, especially air pollution. Due to pollutants present in air, human health as well as animal health and vegetation may suffer. The book can be divided in two parts. The first half presents how the environmental modifications induced by air pollution can have an impact on human health by inducing modifications in different organs and systems and leading to human pathology. This part also presents how environmental modifications induced by air pollution can influence human health during pregnancy. The second half of the book presents the influence of environmental pollution on animal health and vegetation and how this impact can be assessed (the use of the micronucleus tests on *TRADESCANTIA* to evaluate the genotoxic effects of air pollution, the use of transplanted lichen *PSEUDEVERNIA FURFURACEA* for biomonitoring the presence of heavy metals, the monitoring of epiphytic lichen biodiversity to detect environmental quality and air pollution, etc). The book is recommended to professionals interested in health and environmental issues.

*Spaces of Democracy* Clive Barnett,Murray Low,2004-08-03 'This volume successfully exposes the ghostly presence of democracy in the field of geography and shows the value of thinking about democracy geographically. It is a major contribution to serious examination of a normative political issue from a geographical perspective. This is welcome above all because geography is a field whose cultural and economic branches, though often claiming the appellation critical, are currently dominated by unexamined radical political fantasies' - John Agnew, University of California, Los Angeles In an historically unprecedented way, democracy is now increasingly seen as a universal model of legitimate rule.This work addresses the key question: How can democracy be understood in theory and in practise? In three thematically organised

sections, *Spaces of Democracy* uses a critical geographical imagination (informed by thinking on space, place, and scale) to interrogate the latest work in democratic theory. Key ideas and concepts discussed include globalization and transnationalism; representation; citizenship; liberalism; the city and public space; and the media. This volume comprises commissioned work by leading academics investigating democracy. Historical and comparative, animated by wider debates on globalization, it will facilitate the critical discussion of core questions on citizenship, the state, and democracy. *Spaces of Democracy* is essential reading for students of human geography, political science/international relations, and political sociology.

*Citizenship and Identity in Europe* Leslie Holmes, Philomena Murray, 2018-12-17 Published in 1999. Issues of citizenship and identity have rapidly moved up the European and social science agendas in recent years. This book explores the reason for this. It focuses on the dilemmas of citizenship and identity in the uncertain and unpredictable atmosphere of fin de siècle Europe. In the course of eight essays, it explores the general theoretical issues of citizenship and identity – and the relationship between these – in contemporary Europe; the various aspects of European Union citizenship (two chapters); democracy and multiculturalism in Western Europe; pluralism and citizenship, with particular reference to gender in West European politics; the various implications for gender politics of divorce in Western Europe; exclusion and inclusion in central and Eastern Europe; and the extent to which the idea of a Yugoslav national identity has been a failure. *Citizenship and Identity in Europe* will appeal both to informed generalists and to students and scholars of Europe who seek analyses of these issues in Eastern, central and Western Europe from a wide range of perspectives. At a time when the future of Europe is looking more uncertain than it has for decades, this book is both timely and thought-provoking.

Neisseria gonorrhoeae Infections María-Teresa Pérez-Gracia, Beatriz Suay-García, 2021-05-11 Gonorrhea is a sexually transmitted infection caused by the obligate human pathogen "*Neisseria gonorrhoeae*". This Gram-negative diplococcus is highly infective due to its virulence factors: pili, Por proteins, Opa proteins, Rmp proteins, lipooligosaccharides and IgA protease. Despite existing guidelines for its treatment, the incidence of the disease follows an increasing trend worldwide.

This is mainly due to the appearance of antibiotic-resistant strains, inefficient diagnostic methods and poor sexual education. Without an effective vaccine available, the key priorities for the control of the disease include sexual education, contact notification, epidemiological surveillance, diagnosis and effective antibiotic treatment. This Special Issue focuses on some of these important issues such as the molecular mechanisms of the disease, diagnostic tests and different treatment strategies used to combat gonorrhea.

Nanomaterial David G. Capco, Yongsheng Chen, 2014-03-28 The rapidly developing field of nanomaterials has expanded in many commercial areas. More recent studies have begun to provide a foundation for understanding how nanomaterials influence cells and how they also can serve as methodological tools for studies in medicine and cell biology, including research into stem cells. Recent investigations have shown effects of nanomaterials on specific subcellular structures, such as the actin-based brush border network in cells with an increasing emphasis on the barrier function of epithelial tissues. While other studies have shown involvement of nanoparticles in specific cytoplasmic signal transduction events such as the rise in intracellular free calcium, a signaling event known to regulate many changes in cell architecture and function. In parallel, nanomaterials are increasingly used in medicine for drug delivery, treatment of cancer and an increasing number of new applications. This book investigates these areas and also includes new methods for assessment in cell biology and medicine.

**Anxiety in Health Behaviors and Physical Illness** Michael J. Zvolensky, Jasper A. J. Smits, 2007-12-03 This is a single resource offering theoretical perspectives and reviews of research on the link between health behaviors and physical illness to anxiety. The authors explore the idea of reciprocal relations between anxiety and health factors throughout the developmental course. Special attention is devoted to the mechanisms by which certain health factors (e.g. physical exercise) may play a role in the onset or maintenance of particular anxiety disorders.

Regulating Womanhood Carol Smart, 2002-09-11 This collection of original essays looks at a topic of growing interest and debate in feminist and historical circles: the social regulation of women through law during the 19th and 20th centuries, and the resistance which emerged in response. The collection refutes the notion of women oppressed during the 19th century, unable to act in opposition to the law. When issues of motherhood and women's sexuality became areas of public policy, women began to negotiate the law, as case studies from Europe and the USA show. This book should be of interest to students of women's studies, sociology of law, and social policy.
