55 Technology Projects for the Digital Classroom--Vol. II Jacqui Murray,2020-01-22 The all-in-one K-8 toolkit for the lab specialist, classroom teacher and homeschooler, with a years-worth of simple-to-follow projects. Integrate technology

into language arts, geography, history, problem solving, research skills, and science lesson plans and units of inquiry using teacher resources that meet NETS-S national guidelines and many state standards. The fifty-five projects are categorized by subject, program (software), and skill (grade) level. Each project includes standards met in three areas (higher-order thinking, technology-specific, and NETS-S), software required, time involved, suggested experience level, subject area supported, tech jargon, step-by-step lessons, extensions for deeper exploration, troubleshooting tips and project examples including reproducibles. Tech programs used are KidPix, all MS productivity software, Google Earth, typing software and online sites, email, Web 2.0 tools (blogs, wikis, internet start pages, social bookmarking and photo storage), Photoshop and Celestia. Also included is an Appendix of over 200 age-appropriate child-friendly websites. Skills taught include collaboration, communication, critical thinking, problem solving, decision making, creativity, digital citizenship, information fluency, presentation, and technology concepts. In short, it's everything you'd need to successfully integrate technology into the twenty-first century classroom. Visual Design for Online Learning Torria Davis,2015-09-08 Update the visual design of your course in pedagogically sound ways Visual Design for Online Learning spotlights the role that visual elements play in the online learning environment. Written for both new and experienced instructors, the book guides you in adding pedagogically relevant visual design elements that contribute to effective learning practices. The text builds upon three conceptual frameworks: active learning, multiple intelligences, and universal design for learning. This resource explores critical issues such as copyright, technology tools, and accessibility and includes examples from top Blackboard practitioners which are applicable to any LMS. Ultimately, the author guides you in developing effective visual elements that will support your teaching goals while reinforcing the learning materials you share with your students. There has been a steady increase of over 10% in online enrollment for higher education institutions since 2002, yet the visual look of online courses has not changed significantly in the last ten years. Adapting to the needs of students within online classes is critical to guiding your students toward success—and the right visual elements can play an integral role in your students' ability to learn and retain the information they need to thrive in their chosen programs. In fact, visual elements have been shown to increase student participation, engagement, and success in an online course. Leverage the best practices employed by exemplary Blackboard practitioners Explore three foundational conceptual frameworks: active learning, multiple intelligences, and universal design for learning Increase student retention and success Visual Design for Online Learning is an essential reference for all online educators—both new and experienced.

Preparing for Life in a Digital Age Julian Fraillon,John Ainley,Wolfram Schulz,Tim Friedman,Eveline Gebhardt,2014-12-13 Ability to use information and communication technologies (ICT) is an imperative for effective participation in today's digital age. Schools worldwide are responding to the need to provide young people with that ability. But how effective are they in this regard? The IEA International Computer and Information Literacy Study (ICILS) responded to this question by studying the extent to which young people have developed computer and information literacy (CIL), which is defined as the ability to use computers to investigate, create and communicate with others at home, school, the workplace and in society. The study was conducted under the auspices of the International Association for the Evaluation of Educational Achievement (IEA) and builds on a series of earlier IEA studies focusing on ICT in education. Data were gathered from almost 60,000 Grade 8 students in more than 3,300 schools from 21 education systems. This information was augmented by data from almost 35,000 teachers in those schools and by contextual data collected from school ICT-coordinators, school principals and the ICILS national research centers. The IEA ICILS team systematically investigated differences among the participating countries in students' CIL outcomes, how participating countries were providing CIL-related education and how confident teachers were in using ICT in their pedagogical practice. The team also explored differences within and across countries with respect to relationships between CIL education outcomes and student characteristics and school contexts. In general, the study findings presented in this international report challenge the notion of young people as "digital natives" with a self-developed capacity to use digital technology. The large variations in CIL proficiency within and across the ICILS countries suggest it is naive to expect young people to develop CIL in the absence of coherent learning programs. Findings also indicate that system- and school-level planning needs to focus on increasing teacher expertise in using ICT for pedagogical purposes if such programs are to have the desired effect. The report furthermore presents an empirically derived scale and description of CIL learning that educational stakeholders can reference when deliberating about CIL education and use to monitor change in CIL over time.
